

INCREASE YOUR PRODUCTIVITY!

Graphtec Pro Studio

INCLUDED SOFTWARE

Printed Graphics

STREAMLINE YOUR BUSINESS

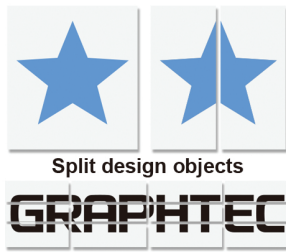

This powerful software contains all of the necessary tools for creating professional designs, configuring the plotter, and outputting jobs all within one program.

30+ FILE FORMAT COMPATIBILITY

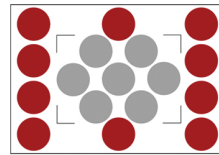

Popular file types including AI, CMX, EPS, JPG, and DXF can be imported, modified, and cut.

Easily add registration marks to your design for contour cutting. There are 10 patterns available based on the design, its length, and media type.

Objects designed to be cut may be split into smaller tiles. This function is ideal for designs that are too large for the width of the media.

Expand the print and cut area to include objects outside of the registration marks! Media waste is minimized.

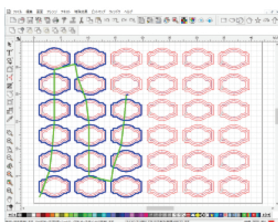

Specified spacing and quantities
 Matrix Copy Function for creating multiple copies of the same object. You are also able to copy objects in specified matrix sets.

Graphtec Pro Studio PLUS

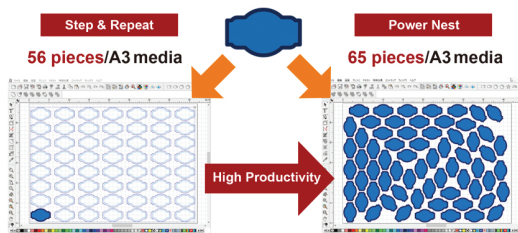

OPTIONAL SOFTWARE

Control Cutting Order
 Cutting order can be set automatically or manually. Increase productivity by reducing cutting times – as well as prevent issues by previewing a simulation of the cutting order.

True Shape Nesting
 Complete jobs faster, using less media, by efficiently fitting as many objects onto the media as possible.

Vectorize Raster Images
 Convert bitmaps into cuttable vector objects. Graphtec Pro Studio PLUS also includes a powerful noise reduction filter.

Rhinestone Function
 Create custom rhinestone apparel templates. Control rhinestone type, size, line placement, spacing interval, and column spacing.
